

# TUFFASS FM210 Cattle Feedlot Conditioners

The TUFFASS FM210 is a heavy duty litter conditioner specially designed to turn and process bovine manure, such as cattle and dairy feedlots.

At 2100mm wide the FM210 includes a heavy duty floor blade to remove all the product from a shed floor. The material is then broken up, mixed and aerated.

This process greatly reduces smells and harmful gasses due to bacteria, mould and other organisms that can grow in the wet material, ensuring a safer environment for both animals and workers. The process can also make it easier to further process or move the product for other uses.

Designed and patented in Italy with over 10 years of experience and development with farmers.
