

TUFFASS

GR2- 2 Tonne

**OPTIONS AVAILABLE:**

- Custom made vinyl cover

Made of marine-grade stainless steel, the GR2 twin spinning disc spreader has a 2000L capacity.

The 2000L hopper is the highest grade currently offered; it is robust and long-lasting. With its high capacity, you can rapidly and simply cover a big area with a variety of granular fertilisers or seeds. Because of this, the GR2 is ideal for broadacre producers of dairy and livestock.

The GR2 offers you a lot of alternatives when it comes to delivering your load due to its twin hydraulic controls.

The GR2 spreader design is unique in that it is made of a single steel frame. A one-piece frame is more durable because it prevents fracturing or splitting along the joints. The GR2 can be used for a variety of purposes because of its powder-coated finish, which also prevents corrosion.

The GR2 has a sturdy frame as well as a support bar and screen inside the hopper. These increase the strength of the hopper by preventing twisting and warping under a heavy load.

The GR2 is a dependable and long-lasting broadacre spreader that has a high-quality oil bath gear box, stainless steel opening vanes, and spinners. It also comes with a 12-month warranty.
